

HIGH EFFICIENCY COOLING FOR **GREEN** DATA CENTRES

**More and more
powerful, high-density
data centres require
state of the art cooling
technology to match the
reliability, modularity
and energy efficiency
required by these
critical applications.**

With over 40 years experience in air conditioning, heating and cooling, Climaveneta's cutting edge technology meets the specific needs of data centre cooling with a comprehensive range of solutions for high precision air conditioning.

All designed to optimise OPEX and CAPEX and to cope with the most demanding reliability and scalability parameters.

Our cutting edge technologies, including magnetic levitation and full electronic modulation, ensure the highest levels of efficiency to perfectly match the dynamics of every 'green' data centre application.

Climaveneta
