

VLT® HVAC Drives Family

A reliable contribution to the environment

The 21st Century focus on energy efficiency is not new, but the emphasis on the consequences of wasted energy and the over-use of fossil fuels to produce energy is at the top of every industrial nation's agenda. Danfoss is dedicated to contribute to this

agenda being the first manufacturer to recognize and develop inverters for use in HVAC systems. Our VLT® HVAC Drives Family optimises the performance in your HVAC applications saving energy in a reliable and user-friendly way.

1.5million

VLT® HVAC Drives installed worldwide

Energy savings through their applications are estimated at 285 million MWhrs a year. This equals the annual energy consumption of 60 million households and has an impact on the annual CO₂ emissions – a reduction of 180 million tonnes!
