

reliable and cost effective

INSULATION PROTECTION

**for heating, ventilating and air conditioning
pipe and ductwork installations**

- **Aluminium melts at 660°C Dobelshield is still intact at over 1200°C**
- **Dobelshield is corrosion resistant with complete edge protection.**
- **Dobelshield has the strength to virtually eliminate reparation.**

Dobelshield is the traditional 'stucco' embossed Aluzink sheet that is being increasingly specified by consultants who are concerned about costs, fire integrity, thermal efficiency and appearance. More and more consultants are refusing to accept aluminium...outdated and prone to mechanical damage...and turning to the "fit and forget" alternative Dobelshield.
