

# No. 1 Manufacturer in Humidification

**Defensor MK5**

The Resistance Steam Humidifier

**Condair GS**

The Gas Fired Humidifier

**Condair Dual**

The Adiabatic Humidifier

**Condair CP3**

The Electrode Steam Humidifier

The Defensor MK5 is a resistance steam humidifier that meets the highest control accuracy requirements. It is designed for operation with tap water or fully demineralised water. It is utilised for completely automatic generation of pressure and mineral free hygienic steam.

The new Condair CP3 electrode steam humidifier combines versatile performance and precise control with ease of use and low cost of ownership, making it ideal for a wide range of applications including large offices, call centres, hospitals and production facilities.

The innovative Condair Dual is primarily distinguished by hygienic humidifying, uniform atomising and low energy consumption. The Condair Dual generates an extremely fine water aerosol spray mist with molecular atomising nozzles, specially adapted to suit individual system requirements.

For more details on the rest of our humidification range including the new generation Gas Fired Steam Generator and the Draabe range of humidification units, please see contact details below.
